PROFESSIONAL PROFILE

Strategic Fullstack Lead with 4+ years of experience architecting end-to-end solutions for enterprise ERPs and Fintech platforms. Expert in bridging high-performance React/Next.js frontends with robust Python (Django, Flask, FastAPI) backends. Proven track record in leading engineering teams, implementing AI-driven RAG systems, and engineering secure financial and medical infrastructures adopted by government and private sectors.

TECHNICAL STRENGTHS

Full Stack	Next.js, React, TypeScript, Python (Django, Flask, FastAPI), Node.js
Data & AI	PostgreSQL, MongoDB, Pinecone (Vector DB), RAG (Gemini Flash 2.0)
Architecture	Microservices, RESTful API Design, OAuth2, RBAC, System Design, Swagger/Spectacular
Infrastructure	Docker, Supabase, Celery, Redis, Sentry, GitFlow, CI/CD
Integrations	Paystack, Squad API, Google Cloud Platform, Zoom, OpenAI

WORK EXPERIENCE

Fowgate LLC February 2025 - Present
Lead Backend Developer *Port Harcourt, Nigeria (Remote)*

- Solely architected a modular, microservices-ready backend for a multi-sector ERP (Oil & Gas, Education, Surveying, HCM, Real Estate e.t.c) using Flask and MongoDB.
- Engineered a RAG-based AI assistant using Gemini Flash 2.0 and Pinecone DB for semantic querying of legal documents like the Petroleum Industry Act (PIA).
- Developed complex OAuth2 flows for Google and Zoom, including custom token refresh logic and persistent credential management for automated meeting scheduling.
- Leading a team of 4 engineers, enforcing GitFlow, design guides, and comprehensive API documentation using RestX and Swagger.

DocuHealth Services December 2024 - Present
Lead Backend Developer *Osun, Nigeria (Remote)*

- Designed and implemented secure RESTful APIs using Django DRF with End-to-End data encryption and Secure data uploads and downloads. We currently have 500+ users.
- Engineered Role-Based Access Control (RBAC) for diverse user types including Hospital Admins, Staff, and Patients e.t.c
- Integrated Paystack for subscription management, implementing idempotent webhooks to ensure transaction integrity.
- Optimized PostgreSQL database performance through efficient indexing and atomic transaction management.

Evidence Loop September 2025 - January 2026
Contract Frontend Engineer *Remote*

- Developed a research-focused UI using React and TypeScript, focusing on high-performance data visualization and clean medical-research workflows.
- Implemented rigorous type-safety and form validation using Zod and custom hooks to minimize runtime errors.

Smart Systems Research Laboratory April 2024 - Present
Software Team Lead *FUTA*

- Direct a team of interns in building internal tools, specializing in transforming complex research requirements into polished user interfaces.
- Mentor junior developers on frontend best practices, including component atomicity, custom hook patterns, and efficient rendering.

· Managed the transition of legacy UI modules to modern React patterns, resulting in a significantly more maintainable and scalable codebase.

Kinplus Technologies April 2023 - July 2023
Frontend Intern *Ekiti, Nigeria*

· Delivered production-ready UI components for client-facing projects with a focus on cross-browser compatibility and accessibility.
· Collaborated with backend engineers to integrate RESTful workflows, becoming the primary resource for resolving complex layout and logic issues.

SELECTED PROJECTS

Futaverse (Lead Backend Engineer) October 2025
Python, Django DRF, Supabase, Celery, Paystack API

· Engineered a comprehensive Ticketing and Event Management System allowing alumni to create and manage large-scale events with integrated sponsorship and donation tiers.
· Implemented a robust Paystack payment gateway integration to handle multi-tier ticket sales, donor contributions, and real-time automated invoicing.
· Architected a donation tracking module with database atomicity to ensure financial transparency and accurate reporting for alumni-sponsored projects.
· Secured the platform using ID Masking (Sqids) and advanced rate limiting to prevent ticket scraping and enumeration attacks.

Splitpay (Squad Hackathon 1st Place Winner) March 2025
Team Lead — Next.js, Node.js, TypeScript, Squad API

· Led a team of 3 to win First Place at the renowned Habaripay's Squad Hackathon by building a revolutionary money management tool.
· Integrated the Squad API for virtual account generation and real-time transaction monitoring, ensuring seamless money movement between splits.
· Directed the technical roadmap and final pitch, resulting in the project being recognized for its innovative approach to financial discipline and UX.

LearNexo March 2025
React, TypeScript, Zod, Tanstack Query

· Built a personalized Edutech platform with a focus on focused learning environments and "distraction-free" UI patterns.
· Engineered complex form management and validation using React Hook Form and Zod to handle multi-step student onboarding.

EDUCATION & PROFESSIONAL TRAINING

Federal University of Technology, Akure 2021 - 2026 (Expected)
Bachelor of Engineering (Hons) in Computer Engineering

Squad Hackademy 2024 - Present
3-Year Professional Software Engineering Fellowship focusing on full-stack mastery and professional work-readiness through direct mentorship from industry-leading senior engineers and architects.

Brain Bench Academy March 2021 - August 2021
Python and Machine Learning Training (Python, GUI, Flask, ML Algorithms, DB Design)
